VOL. XV

STATE COLLEGE, PULLMAN, WASHINGTON, OCTOBER 14, 1908

NO. 3

W. S. C. WINS

Crimson and Gray Football Eleven Improving.

Cheney Players are Game Losers; Good Material in Home Team.

W. S. C., 73; CHENEY STATE NORMAL, 0

Thus ended the first act of the football drama which will hold the boards of the Northwest six weeks. It was simply a walk-away for the State College men when they met the eleven from the State Normal on Rogers field last Saturday. All who witnessed the game, and there was a goodly bunch who lined the hillside that forms the best natural amphitheater in the country, are unanimous in saying that Coach Walter Rheinschild has done well this year, and has made rapid progress. He started with a large amount of material with but few old varsity men to pick from, and turned out a team which literally wiped the normals off the face of the earth.

Coach Is Silent.

The game does not figure in the record for the championship, on which some of the most sanguine and optimistic have begun to cast longing glances, but it has served to instil some additional spirit in the hearts of many who thought that everything was hopeless. The prospect is not roseate yet by any means, and Riney is preserving an ominous silence with regard to the team.

Of course, W.S.C. wants that championship and is going to get it if superhuman efforts and consistent plugging counts for anything. But what is of far more importance than a dozen championships is the spirit of the institution toward the men who devote their best energies to the

Veterinary Building

The new veterinary building is a three-story brick building in which provision is made for surgical operations, dissections, as well as the care of patients. The hospital wing of this building is 32x67 feet. On the lower floor are the kennels, cold storage for dissecting material, stalls for the department driving horses, wash racks, soaking stall, and harness room. On the main floor there are fourteen single stalls, and five roomy box stalls, an up to date dressing room, and a soaking stall. The third floor of this wing will be used for the storage of hay and grain.

Rooms for Attendants.

There are also two rooms for the groom, and for senior students who may be attending the patients in the hospital. Only one-half of the main part of the building is being built. This will contain on the lower floor, carriage rooms, and the second floor will be used for surgery, and will be equipped with a humane equine operating table, and other equipment necessary for an up to date surgery.

Dissection on Third Floor.

The third floor will be used entirely for dissecting purposes. An electric elevator will be placed in the building. It will be possible to move horses from floor to floor without any great inconvenience. This building has been completed with the view of having the very best appointments possible in a veterinary hospital.

The piano concert given by Professor Karl Tunberg, the new instructor in piano, last week, was one of the very pleasing musical events of the year, thus far. Professor Tunberg is a very capable musician, and the growing popularity of the school of music will undoubtedly render his work at the college pleasing to himself as well as to others.

IMPROVEMENTS

Less Coal and More Heat by New Method.

Old Rotary Grates Removed and Replaced by Hand Stoked Grates

During the past summer a number of improvements have been made in the mechanical building in the way of remodeling the boilers and furnaces used in heating the college buildings and running the power plant.

New Grates Installed.

The old rotating grate stokers formerly in the boiler furnaces were found by test to be very inefficient, since they wasted much unburned coal in the ashes. They were removed and new grate surfaces installed. The new grates are so placed as to be somewhat lower than the former grates, and are required to be hand stoked.

Less Coal Used.

So efficient and economical is the new arrangement that instead of the two large 150 horse power boilers, using a number of tons of coal daily, only one of these boilers is now used to do this heating of all the large college buildings and the power plant work with practically only half as much coal. When colder weather comes on, however, another boiler will be "fired up" to increase the heating capacity and compensate for cold weather.

Lecture Course

- Feb. 2—Rev. Father Daly, of Milwaukee.
- March 30—The Dunbar Quartet, of Chicago.
- April 5—Thomas E. Greene, of New York City.
- April 16—Hon. John A. Johnson, Governor of Minnesota.
- May 1—Hon. Joseph W. Folk, Governor of Missouri.

Class Rivalry

Guarding their banner from the onslaught of the Freshmen, four members of the Sophomore class spent a delightfully cool night slumbering on the highest point of the new auditorium building last Friday night. With blankets spread out so as to form a cover for the only entrance to the tower, the Sophs, White, Skeels and William Coulter snoozed peacefully from early evening until awakened by a horde of '12 men clambering over the tin roof about 5 o'clock the next morning.

The stunt of the Sophomores is without an equal in the history of the institution. Class rivalry between the men of the '11 and the '12 classes is at its height, each class striving to outdo the others in stunts to perpetuate its fame. The climax was reached last week when the Sophomores, under cover of darkness, floated their banner from the flag staff of the new auditorium building.

Scaling Gibraltar.

A large percentage of the boys of the class stood guard during the progress of this work, but once completed, a big problem was facing the Sophies in keeping the Freshies from tearing down the emblem during the night. In this the '11 boys were greatly favored by the construction of the tower, which proved to be a veritable Gibraltar. The only access to its roof was by means of a ladder leading to a small trap door, some twenty feet above the landing below. This means of entrance was so small that one of the more portly members of the Sophomore class was unable to squeeze his body through and he was forced to return to the dormitory.

Warriors Assemble.

About 9 o'clock at night the banner was flung to the breezes and was soon observed by the Freshies, among whom the word was passed for a meeting at the hour of 3 o'clock in the morning.
